

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method for deploying at least one stored procedure to a device, the method comprising:

generating a data project and a device database within a solution;

associating the data project with the device database;

adding the at least one stored procedure to the data project;

receiving a request to build the solution, and, responsive to the request:

automatically embedding each stored procedure in the data project into the device database;

automatically registering each stored procedure in the data project with the device database; and

deploying the device database with the at least one embedded stored procedure as a single unit to the device.

2. (Previously Presented) The method of claim 1, further comprising compiling code for the at least one stored procedure.

3. (Original) The method of claim 1, comprising embedding a trigger into the device database.

4. (Previously Presented) The method of claim 1, further comprising reserving data storage capacity for the at least one stored procedure within the device database.

5. (Currently Amended) The method of claim 1, further comprising:

determining whether the at least one stored procedure has been previously embedded in ~~on~~ the device database; and

if the at least one stored procedure has been previously embedded, then removing the previously embedded stored procedure.

6. (Original) The method of claim 1, comprising deploying the device database to the device as part of a main device project.

7. (Original) The method of claim 1, comprising deploying the device database to the device as part of a device setup project.

8. (Currently Amended) The method of claim 1, comprising registering the at least one stored procedure with the device database at the device after the device database is deployed with the at least one embedded stored procedure to the device.

9. (Currently Amended) A method for deploying at least one stored procedure to a device, the method comprising:

providing a first interface that enables a data project and a device database to be generated within a solution, the first interface further enabling the data project to be associated with the device database;

providing a second interface that enables the at least one stored procedure to be added to an assembly within the data project;

receiving a request to build the solution, and, responsive to the request:

automatically embedding the assembly within the device database; and

automatically registering the assembly with the device database; and

deploying the device database with the embedded assembly as a single unit to the device.

10. (Previously Presented) The method of claim 9, further comprising providing an interface displaying a view of the at least one stored procedure.

11. (Cancelled)

12. (Previously Presented) The method of claim 10, wherein the second interface enables the at least one stored procedure to be deleted from the assembly.

13. (Previously Presented) The method of claim 9, further comprising providing an interface displaying a view of properties of the at least one stored procedure.

14. (Previously Presented) The method of claim 9, further comprising compiling code for the at least one stored procedure.

15. (Original) The method of claim 9, comprising embedding the assembly within the device database, the assembly comprising a trigger.

16. (Currently Amended) The method of claim 9, further comprising:
determining whether the assembly has been previously embedded in ~~on~~ the device database; and

if the assembly has been previously embedded, then removing the previously embedded assembly.

17. (Original) The method of claim 9, comprising deploying the device database to the device as part of a main device project.

18. (Original) The method of claim 9, comprising deploying the device database to the device as part of a device setup project.

19. (Currently Amended) The method of claim 9, comprising registering the at least one stored procedure with the device database at the device after the device database has been deployed with the embedded assembly to the device.

20. (Currently Amended) A computer readable medium for deploying a stored procedure to a device, the computer readable medium comprising computer executable instructions for:
generating a data project and a device database within a solution;
associating the data project with the device database;
adding at least one stored procedure to the data project;
receiving a request to build the solution, and, responsive to the request:

automatically embedding each stored procedure in the data project into the device database;

automatically registering each stored procedure in the data project with the device database; and

deploying the device database with the at least one embedded stored procedure as a single unit to the device.

21. (Previously Presented) The computer readable medium of claim 20, further comprising computer executable instructions for compiling code for the at least one stored procedure.

22. (Original) The computer readable medium of claim 20, comprising computer executable instructions for embedding a trigger into the device database.

23. (Previously Presented) The computer readable medium of claim 20, further comprising computer executable instructions for reserving data storage capacity for the at least one stored procedure within the device database.

24. (Currently Amended) The computer readable medium of claim 20, further comprising computer executable instructions for:

determining whether the at least one stored procedure has been previously embedded in on the device database; and

if the at least one stored procedure has been previously embedded, then removing the previously embedded stored procedure.

25. (Original) The computer readable medium of claim 20, comprising computer executable instructions for deploying the device database to the device as part of a main device project.

26. (Original) The computer readable medium of claim 20, comprising computer executable instructions for deploying the device database to the device as part of a device setup project.

27. (Currently Amended) The computer readable medium of claim 20, comprising computer executable instructions for registering the at least one stored procedure with the device database at the device after the device database has been deployed with the at least one embedded stored procedure to the device.

28. (Currently Amended) A computer readable medium for deploying at least one stored procedure to a device, the computer readable medium comprising computer executable instructions for:

providing a first interface that enables a data project and a device database to be generated within a solution, the first interface further enabling the data project to be associated with the device database;

providing a second interface that enables the at least one stored procedure to be added to an assembly within the data project;

receiving a request to build the solution, and, responsive to the request:

automatically embedding the assembly within the device database; and

automatically registering the assembly with the device database; and

deploying the device database with the embedded assembly as a single unit to the device.

29. (Previously Presented) The computer readable medium of claim 28, further comprising computer executable instructions for providing an interface displaying a view of the at least one stored procedure.

30. (Cancelled)

31. (Previously Presented) The computer readable medium of claim 29, wherein the second interface enables the at least one stored procedure to be deleted from the assembly.

32. (Previously Presented) The computer readable medium of claim 28, further comprising computer executable instructions for providing an interface displaying a view of properties of the at least one stored procedure.

33. (Currently Amended) The computer readable medium of claim 28, further comprising computer executable instructions for compiling code for the ~~the~~ at least one stored procedure.

34. (Original) The computer readable medium of claim 28, comprising computer executable instructions for embedding the assembly within the device database, the assembly comprising a trigger.

35. (Currently Amended) The computer readable medium of claim 28, further comprising computer executable instructions for:

determining whether the assembly has been previously embedded in ~~on~~ the device database; and

if the assembly has been previously embedded, then removing the previously embedded assembly.

36. (Original) The computer readable medium of claim 28, comprising computer executable instructions for deploying the device database to the device as part of a main device project.

37. (Original) The computer readable medium of claim 28, comprising computer executable instructions for deploying the device database to the device as part of a device setup project.

38. (Currently Amended) The computer readable medium of claim 28, comprising computer executable instructions for registering the ~~the~~ at least one stored procedure with the device database at the device after the database has been deployed with the embedded assembly to the device.
